AI-Assisted Logistics Customer Service

Student Name: Vitthal Sharma
Roll Number: 2620994580
Batch:BBA LSCM I BATCH
Date: 8 October 2026
AI Tool Used: ChatGPT

Prompt used - Write a customer message about a delayed shipment.

Observation:

> The response is polite and easy to understand, but it is too general. It does not identify the shipment or provide the specific delay reason and revised delivery time.

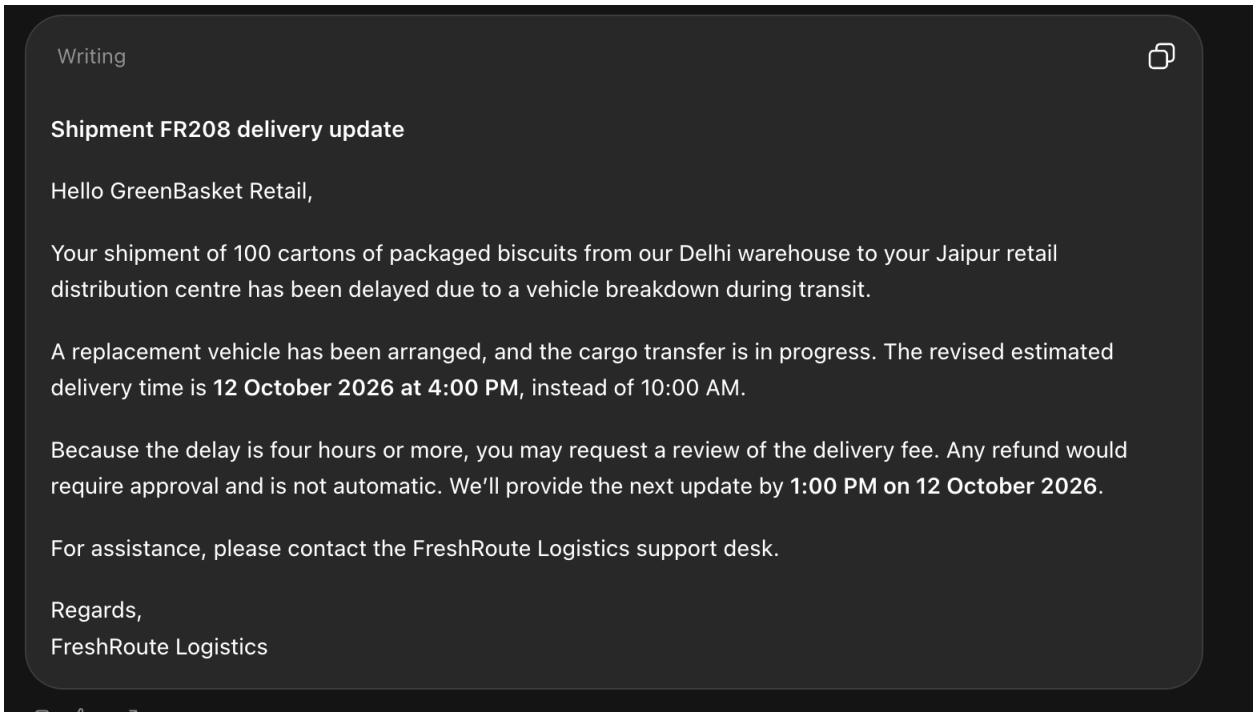

Two limitations identified:

1. It does not mention the shipment ID **FR208** or identify the specific shipment.
2. It does not provide the actual delay reason, revised estimated delivery time, or next update time.

ROUND 2 -Context and Constraints

Prompt used - Company: FreshRoute Logistics
Shipment ID: FR208
Customer: GreenBasket Retail
Goods: 100 cartons of packaged biscuits
Route: Delhi warehouse → Jaipur retail distribution centre
Scheduled delivery: 12 October 2026, 10:00 AM
Revised estimated delivery: 12 October 2026, 4:00 PM
Delay reason: Vehicle breakdown during transit
Recovery action: A replacement vehicle has been arranged; cargo transfer is in progress
Next customer update: 12 October 2026, 1:00 PM
Fictional company policy: For a delay of four hours or more, the customer may request a delivery-fee review. A refund is not automatic and requires approval
Assistance: Customers can contact the logistics support desk
Information not provided: Delivery fee, refund amount, driver contact number, live vehicle location and confirmed cargo condition

Observation:

The response is more specific and useful than the Round 1 response because it includes the shipment ID, delivery times, delay reason, recovery action and next update. It also clearly treats the revised delivery time as an estimate and explains that a refund is not automatic.

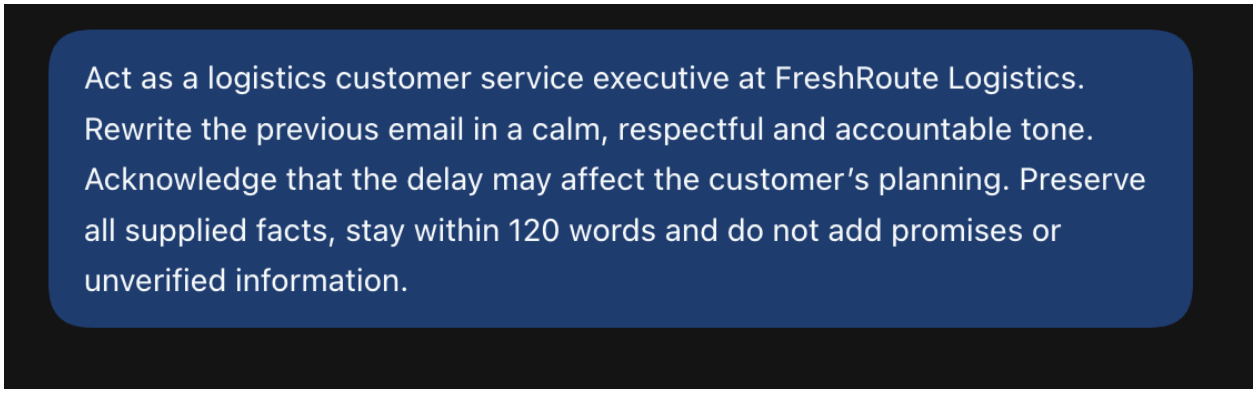

Two improvements compared with Round 1:

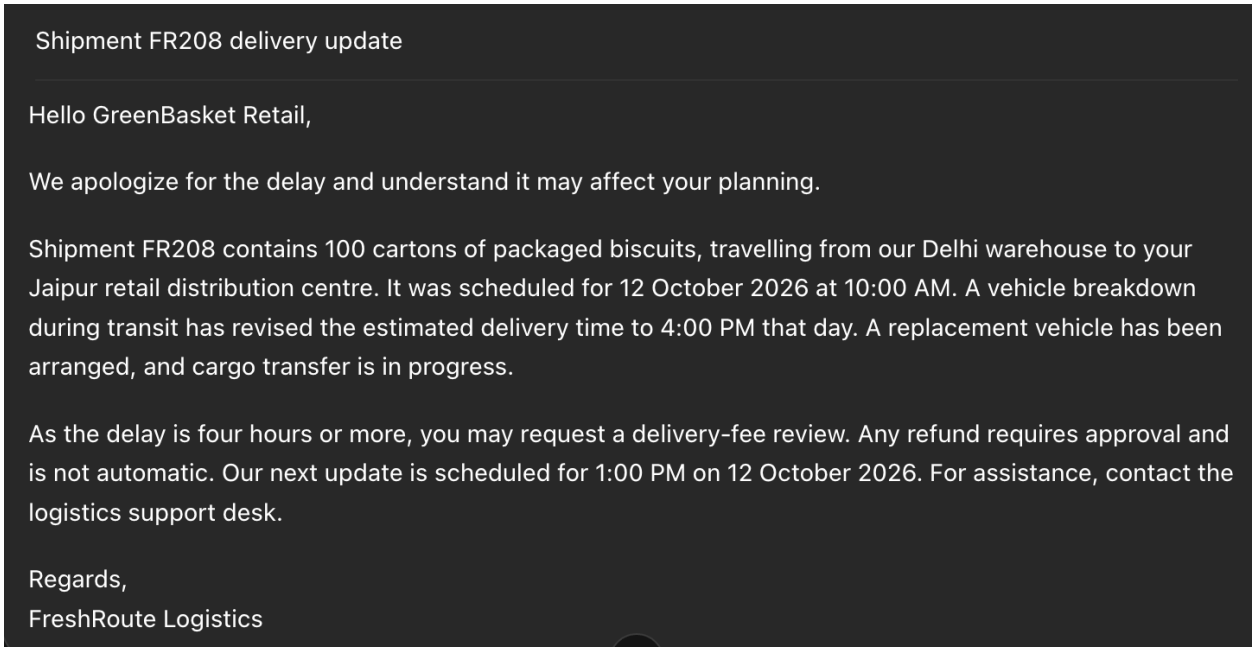

1. The response uses the supplied shipment facts instead of giving a generic delay message.
2. It avoids unsupported information and clearly distinguishes the estimated delivery time from a guaranteed delivery time.

Round 3: Role Prompting

Prompt Used:

> Act as a logistics customer service executive at FreshRoute Logistics. Rewrite the previous email in a calm, respectful and accountable tone. Acknowledge that the delay may affect the customer's planning. Preserve all supplied facts, stay within 120 words and do not add promises or unverified information.

OBSERVATION:

The response has a calmer and more respectful tone than the previous version. It acknowledges that the delay may affect the customer's planning while keeping the supplied facts unchanged.

Useful change in tone:

The AI made the message more empathetic and accountable by acknowledging the inconvenience caused by the delay, while still keeping the communication professionaL

Round 4: Few-Shot Prompting

Prompt Used:

Follow the concise question-and-answer style of these examples:

Customer: "What is my shipment reference?"
Response: "Your shipment reference is FR208."

Customer: "When will I receive the next update?"
Response: "Your next update is scheduled for 12 October 2026 at 1:00 PM."

Now answer these questions using only the supplied shipment information:

1. Why is my shipment delayed?
2. What is being done to recover the shipment?
3. Will I automatically receive a refund?
4. Can you confirm that all cartons are undamaged?

Keep each answer within two sentences. If information is unavailable, state that clearly and refer the customer to the logistics support desk. Do not invent details.

Prompt Used:

> Follow the concise question-and-answer style of these examples:
>
> Customer: "What is my shipment reference?"
> Response: "Your shipment reference is FR208."
>
> Customer: "When will I receive the next update?"
> Response: "Your next update is scheduled for 12 October 2026 at 1:00 PM."
>
> Now answer these questions using only the supplied shipment information:
>
> 1. Why is my shipment delayed?
> 2. What is being done to recover the shipment?
> 3. Will I automatically receive a refund?
> 4. Can you confirm that all cartons are undamaged?
>
> Keep each answer within two sentences. If information is unavailable, state that clearly and refer the customer to the logistics support desk.

Show more

1. **Customer:** "Why is my shipment delayed?"
   Response: "The vehicle carrying your shipment broke down during transit."
2. **Customer:** "What is being done to recover the shipment?"
   Response: "A replacement vehicle has been arranged, and cargo transfer is in progress."
3. **Customer:** "Will I automatically receive a refund?"
   Response: "No. For a delay of four hours or more, you may request a delivery-fee review, but any refund requires approval."
4. **Customer:** "Can you confirm that all cartons are undamaged?"
   Response: "The cartons' confirmed condition has not been provided. Please contact the logistics support desk for assistance."

Observation:

The examples guided the AI to use a concise question-and-answer format. The response followed the same pattern and clearly separated each customer question from its answer.

Effect of Few-Shot Examples:

The examples helped the AI keep the answers short, direct and consistent. They also encouraged it to avoid guessing when information such as cargo condition was not provided.

Round 5: Structured-Output Prompting

PROMPT USED - Using only the supplied shipment facts and fictional policy, create a table with three columns: Customer Question, Answer Based on Supplied Information, and Missing Information or Approval Needed.

Answer these questions:

1. When was delivery originally scheduled?
2. What is the revised estimated delivery time?
3. Why is the shipment delayed?
4. What recovery action is underway?
5. How much refund will I receive?
6. Where is the vehicle currently located?

Write “Not provided” where information is unavailable. Write “None” in the final column when no additional information is needed to answer the question. Do not guess.

Using only the supplied shipment facts and fictional policy, create a table with three columns: Customer Question, Answer Based on Supplied Information, and Missing Information or Approval Needed.

Answer these questions:

1. When was delivery originally scheduled?
2. What is the revised estimated delivery time?
3. Why is the shipment delayed?
4. What recovery action is underway?
5. How much refund will I receive?
6. Where is the vehicle currently located?

Write “Not provided” where information is unavailable. Write “None” in the final column when no additional information is needed to answer the question. Do not guess.

Customer Question	Answer Based on Supplied Information	Missing Information or Approval Needed
When was delivery originally scheduled?	12 October 2026 at 10:00 AM.	None
What is the revised estimated delivery time?	12 October 2026 at 4:00 PM.	None
Why is the shipment delayed?	The vehicle broke down during transit.	None
What recovery action is underway?	A replacement vehicle has been arranged, and cargo transfer is in progress.	None
How much refund will I receive?	Not provided. A refund is not automatic.	Delivery fee and refund amount are not provided; any refund requires approval.
Where is the vehicle currently located?	Not provided.	Live vehicle location is not provided.

Observation:

The table is easier to review than a paragraph because each customer question and its answer are clearly separated. It also makes missing information and approval requirements easy to identify.

Use for Customer Support:

This table can help a customer support employee quickly find verified answers and avoid giving customers incorrect or unconfirmed information.

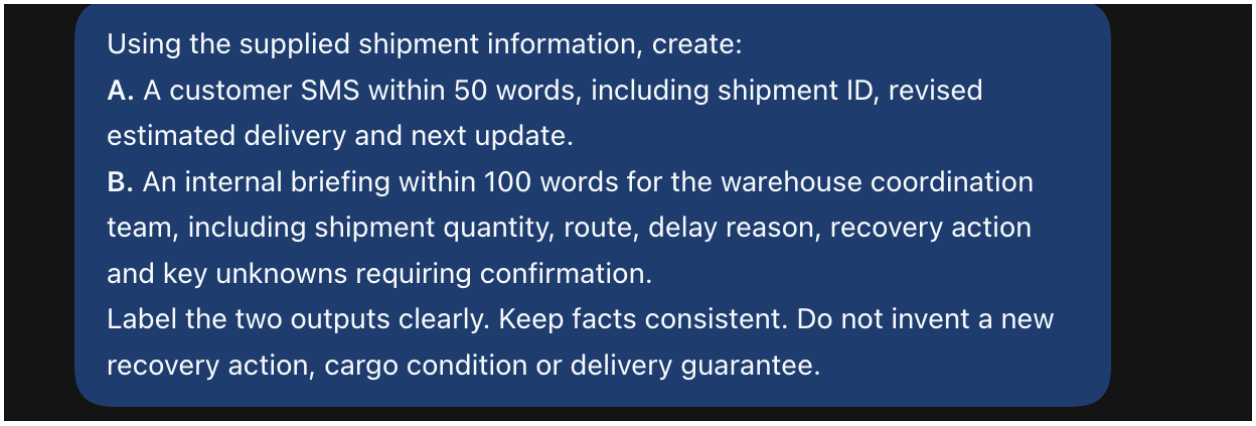

Round 6: Audience-Based Prompting

PROPMT USED - Using the supplied shipment information, create:

A. A customer SMS within 50 words, including shipment ID, revised estimated delivery and next update.

B. An internal briefing within 100 words for the warehouse coordination team, including shipment quantity, route, delay reason, recovery action and key unknowns requiring confirmation.

Label the two outputs clearly. Keep facts consistent. Do not invent a new recovery action, cargo condition or delivery guarantee.

A. Customer SMS

FreshRoute Logistics: Shipment FR208's revised estimated delivery is 12 October 2026 at 4:00 PM. Your next update is scheduled for 1:00 PM on 12 October. For assistance, contact the logistics support desk.

B. Internal briefing

FR208: 100 cartons of packaged biscuits for GreenBasket Retail, travelling Delhi warehouse → Jaipur retail distribution centre. Scheduled delivery: 12 October 2026, 10:00 AM; revised estimate: 4:00 PM. Delay reason: vehicle breakdown during transit. Recovery: replacement vehicle arranged; cargo transfer in progress. Confirmations needed: delivery fee, refund amount, driver contact number, live vehicle location, and confirmed cargo condition. Policy: for delays of four hours or more, the customer may request a delivery-fee review; refunds are not automatic and require approval. Next customer update: 12 October 2026, 1:00 PM.

Observation:

The customer SMS is short and easy to understand, while the internal briefing provides more operational details for the warehouse team. Both outputs use the same shipment facts without adding unverified information.

Why the two audiences need different messages:

Customers need a brief and clear update about delivery timing and support, while the warehouse team needs more operational details to coordinate the shipment and confirm missing information.

Live Change Challenge

Prompt used - Update the previous customer email and SMS using this new information: the revised estimated delivery is now 6:00 PM on 12 October 2026, and the next customer update is now 3:00 PM on 12 October 2026. Preserve all other supplied facts and the existing policy. Remove the outdated 4:00 PM and 1:00 PM timings. Keep the revised delivery time clearly identified as an estimate, not a guarantee. Do not invent any new information.

Update the previous customer email and SMS using this new information: the revised estimated delivery is now 6:00 PM on 12 October 2026, and the next customer update is now 3:00 PM on 12 October 2026. Preserve all other supplied facts and the existing policy. Remove the outdated 4:00 PM and 1:00 PM timings. Keep the revised delivery time clearly identified as an estimate, not a guarantee. Do not invent any new information.

Recipients

Shipment FR208 delivery update

Hello GreenBasket Retail,

We apologize for the delay and understand it may affect your planning.

Shipment FR208 contains 100 cartons of packaged biscuits travelling from our Delhi warehouse to your Jaipur retail distribution centre. Delivery was originally scheduled for 12 October 2026 at 10:00 AM. A vehicle breakdown during transit has revised the estimated delivery time to 6:00 PM that day. This is an estimate, not a guarantee. A replacement vehicle has been arranged, and cargo transfer is in progress.

For a delay of four hours or more, you may request a delivery-fee review. Any refund requires approval and is not automatic. Your next update is scheduled for 3:00 PM on 12 October 2026. For assistance, contact the logistics support desk.

Regards,
FreshRoute Logistics

FreshRoute Logistics: Shipment FR208's revised estimated delivery is 6:00 PM on 12 October 2026. This is an estimate, not a guarantee. Your next update is scheduled for 3:00 PM that day. For assistance, contact the logistics support desk.

Explanation / Verification

I checked the updated email and SMS against the new information. The revised estimated delivery was changed to 6:00 PM and the next customer update was changed to 3:00 PM. I also checked that the outdated timings were removed and that the delivery time was still presented as an estimate, not a guarantee.

7. Manual Verification

Detail to check	Correct information	Correct in final output?	Correction made, if needed
Shipment ID	FR208	Yes	None
Revised estimated delivery	12 October 2026, 6:00 PM	Yes	None
Next update	12 October 2026, 3:00 PM	Yes	None
Delay reason, if mentioned	Vehicle breakdown during transit	Yes	None

Recovery action, if mentioned	Replacement vehicle arranged; cargo transfer in progress	Yes	None
Refund policy, if mentioned	Fee review may be requested; refund requires approval	Yes	None
Cargo condition	Not confirmed	Yes	None
Delivery wording	Estimated arrival; no guarantee	Yes	None

8. Reflection

1. Which prompting strategy produced the most useful output, and why?

Context and constraints produced the most useful output because the AI had the complete shipment information and clear instructions about what it could and could not include. This made the response more accurate and reliable.

2. How did adding context change the initial response?

Adding context changed the response from a generic delay message into a specific customer communication. It included the shipment ID, delivery timings, delay reason, recovery action and next update.

3. What unsupported claim did you identify, or what potential error did you check for?

I checked for unsupported information such as a refund amount, vehicle location, driver contact number and cargo condition. I made sure the AI did not present the estimated delivery time as a guarantee.

4. How did the customer message differ from the internal briefing?

The customer message was short, clear and focused on delivery information and the next update. The internal briefing included more operational details such as shipment quantity, route, recovery action and information that still needed confirmation.

5. What must a human verify before sending these messages?

A human should verify the shipment ID, delivery timings, delay reason, recovery action and company policy before sending the messages. They should also check that the AI has not invented information or made promises that the company cannot guarantee.

9. AI-Use Declaration

AI-Use Declaration

> “I used ChatGPT to generate and refine draft communication. I checked the outputs against the supplied fictional facts and policy. The observations, verification and reflection are my own work.”
